

## Concept design released

The master plan for Moree Hospital was released in April 2022 for feedback.

In response to the feedback received, the master plan has been updated and the early design has been developed.

We welcome feedback on the concept design and encourage you to participate in our online survey.

### Moree Hospital master plan

The master plan for Moree Hospital includes a new building on the existing site as the major component, and complete refurbishment of the existing inpatient building. The new building will house acute services including emergency, imaging, birthing, and the maternity and inpatient unit. Community health, outpatients, and administration will be housed in the fully refurbished building. A central courtyard will be created with opportunities for the design to create a calming environment that is culturally respectful.

There will be one main entry for the public to improve access and security. The Emergency Department will be located near the main entry, and the Ambulance Bay will have its own separate, discrete entry.

The concept design shows the interaction between the new and refurbished buildings, flow of patients, visitors and staff throughout the site and the external finish. The design response respects the site, Country and also the history to provide a modern healthcare setting for all services onsite.

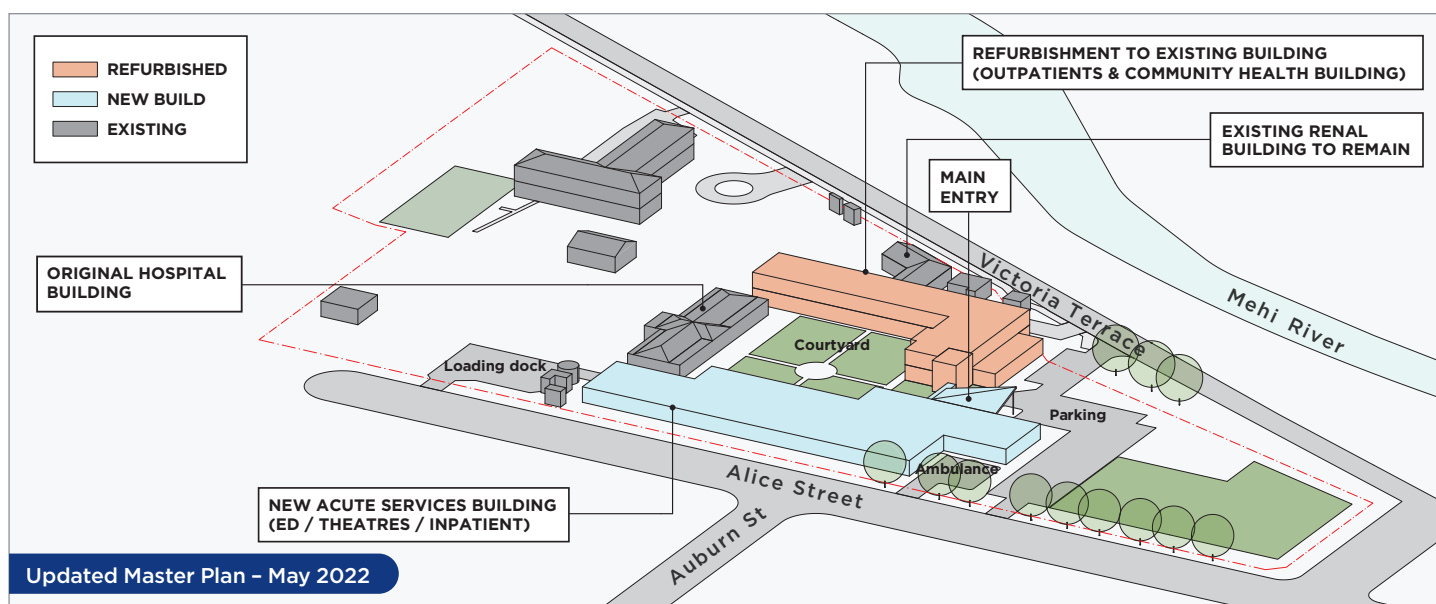

## A place for healing, connection and continuity

The design elements for the hospital have been inspired by the local flora and fauna and the connection to community and Country. Elements of the design that build a healing space for Moree Hospital include:

- Common entry for the public
- Improved connection of services
- Privacy and dignity
- Natural light
- Visual connection to the landscape
- Physical access to the landscape
- Embracing culture

## Where to next?

Over the coming months the project team will develop the detailed design. To do this we will continue to consult with staff, key stakeholders and the community. The feedback received from the survey will also help inform these designs.
